                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Canalyzed using methylation sensitive PCR analyzis. Amplification of the Caspa gene was performed in reaction CC for untranslated region (UTR) of the Caspa gene was performed in reaction CC mixtures containing bisulfite treated DNA. Primers AAA51818-23 were CC designed to produce a 320 bp fragment in the upstream region of Caspa CC gene extending from nucleotides +221 to +541. Wild type primers were CC controls without DNA were also performed. CASPB, a cystelne protease, is CC part of the death inducing signaling complex (DISC) associated with the CASPB receptor. CASPB is inactivated in cancers, and plays a role of a tumour suppressor gene. The CASPB promoter region sequences, in CC particular Region i and Region 2, are crucial to the design and execution CC of the genomic methylation PCR analysis of CASPB gene inactivation. CC Methylation PCR can be used to examine even minute amounts of patient CC aga-33.4. The methods are used to diagnose or prognose cancer. Cancer is treated by administering a vector that expresses a gene encoding CC functional CASPB in cells. The cancer that is diagnose cancer. Cancer is C lung carcinoma, non-small-cell lung carcinoma, coloractal carcinoma, juvenile neuroblastoma (preferred), small-cell contering cervical carcinoma and be diagnosed with the new method. A kit for screening for a compound that induces death-receptor-mediated CC apoptosis in cells containing an inactivated CASPB gene is also

                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DB seq

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            sequence is a dinucleotide (TnCn) repeat. At positions 136394 and 136401 a single subclone disagrees with the sequence generated from the spanning PCR product. The subclone calls a T at both positions in contrast to the called by the PCR product."

This submission represents a partial sequence of clone RP23-349P1. Only the unique (non-overlapping) sequence is represented. The remaining sequence overlaps clone RP23-469C2 (AC098839). An overlap of 2kb is included in this submission for reference. Base 10433 to base 19478.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequence.

                                                                                                                                                                                                   The RPCI-11 human BAC library was made from the blood of one male donor, as described by Oscedawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
